The waist-to-hip ratio has been found to be an important predictor of health problems.

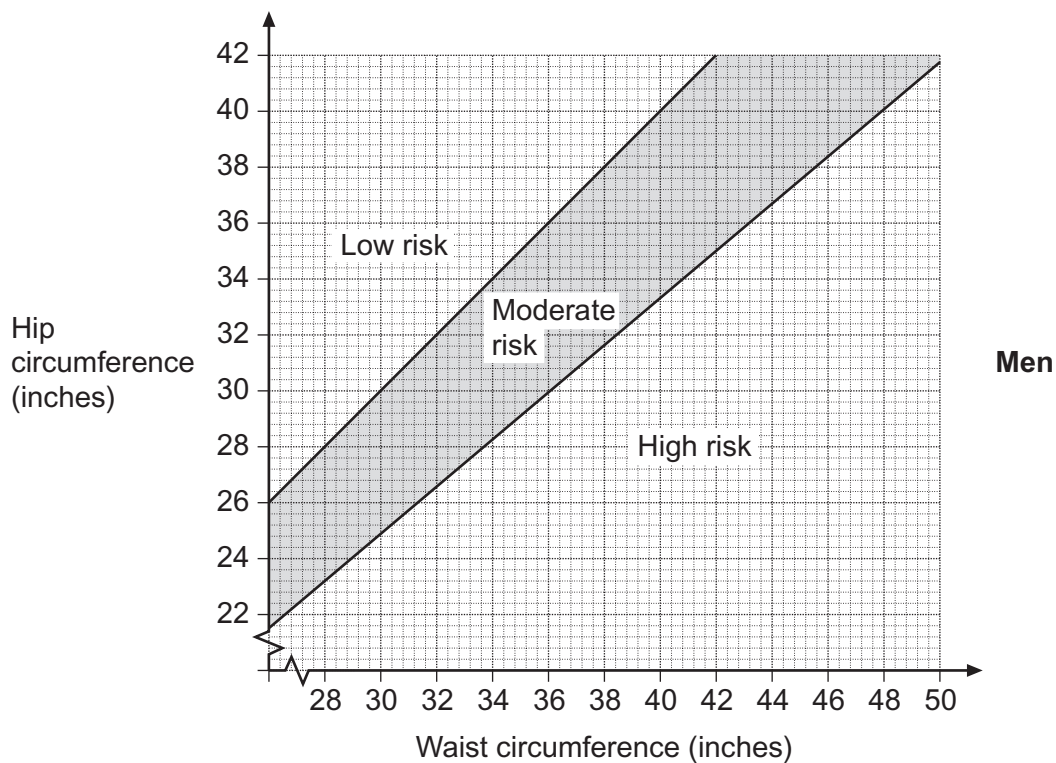

The ratio is expressed as  $1 : n$

where 
$$n = \frac{\text{waist circumference}}{\text{hip circumference}}$$

The table shows the health risk associated with different ratios.

Risk	Men	Women
High Risk	$n > 1.2$	$n > 1$
Moderate Risk	$1 \leq n \leq 1.2$	$0.8 \leq n \leq 1$
Low Risk	$n < 1$	$n < 0.8$

This graph shows the health risk for **men** for various waist and hip circumferences.
